

## **Water Conservation Policy**

Water is life it should neither be wasted nor be misused. There are many parts of the world and in our country where people do not get clean drinking water and are forced to drink unclean and unhealthy water. To many people, even this polluted water is not available. Signals of a future shortage of water are evident such as lower water levels, increasing salinity, and drying rivers.

It is extremely important that we start understanding the seriousness of this issue and adopt measures to conserve water. UCP also promotes the sagacious use of water. Some of the salient features of the water conservation policy of UCP are given here:

1. Reuse water for inferior purposes
2. Use rainwater
3. Use Altered Nozzles reducing water consumption by 98%
4. Use Low-flush or Dual-flush flush systems in bathrooms
5. Try not to use running water directly
6. Never keep water running when not used
7. Regularly check leakages in the water supply and places of water use
8. Processor treat sewage water
9. Promote the use of filtered water instead of bottled water
10. Use reusable glasses or cups for drinking water
11. Use any other device that will reduce water use
12. Do not use drinking water for plants and washing
13. Create awareness about water conservation
